Abstract

This report analyses the findings of a follow-up survey of child-related news contents, in newspapers with an aim to assess the coverage trend and its ethical standards. The survey monitored 10 national-level mainstream dailies over a year (January 2013 to December 2013). A secondary set of data from the arena of general news was analysed in order to explore the impacts of inappropriate news content on children. An introduction to the ethical concerns of news coverage in the context of children is provided.

This follow-up content analysis takes into account the findings of previous two studies on the same subject. One was a baseline study monitoring media over three consecutive months in 2009. And the other, a follow-up study, covered six fortnights spread across a year (June 2010 to May 2011). This exercise began on the premise that journalists can play a strong role in ensuring the wellbeing of children and in minimising any potential harm to them from news consumption.

The comprehensive trend finds a lack of planned focus and consequently, insufficient news coverage of children and their interests or affairs to be a key problem. Dominance of surface coverage of events and issues, inadequacies of reportorial enterprise and a dearth of in-depth coverage appear to be major problems. Insensitivity to the issues of portrayal and dignity, lack of thought to the safety and security of children in sensitive situations, and inconsideration of potential negative impacts of gruesome depictions on child consumers of news could also be noted in the general trend of coverage. However, between 2009 and 2013, a few positive changes can be traced even if disjointedly and sporadically.

The analysis finds that while capacity development of journalists is essential, the desired change in the coverage trend cannot be achieved without ensuring supports at the top levels of management and editorial policy-making.

Introduction

A follow-up study in 2011, preceded by a baseline study done in 2009 (published 2010) explored the ethical standards of journalism in Bangladesh in the context of children. The present analysis of contents in more or less the same set of selected national-level newspapers comes as a second follow-up in continuity.

This second follow-up content analysis tries to get a better comprehension of the trend of news coverage on children and their affairs, and the areas of ethical concerns in this regard. It also cursorily reviews contents in the arena of general news that could have negative impacts on a child reader or viewer.

All these studies began on the premise that journalists can play a strong role in ensuring the wellbeing of children and in minimising any potential harm to them from news consumption. While the baseline study aimed at designing a training programme for journalists, the subsequent two follow-up content analyses aim at indicating further steps required to ensure ethical journalism on and for the children.

JOURNALISM ETHICS AND CHILDREN

Ethical journalism recognises serving the public as its core responsibility. The responsibility is towards truth and towards the public need to know. The ultimate goal is a healthy communal life. In order to serve the community, journalism must keep watch over the public interest and help the processes of democratic discussion, debate, decision-making and accountability of the power to the people.

Journalism itself must render its accounts to the public. Journalists need freedom in order to serve the public. That freedom is only justified by ethical and responsible journalism.

Commitment to truth, impartiality, fairness, integrity and independence, respecting the privacy and other rights of individuals and balancing them with the public interest are professional as well as moral and ethical values that journalists must uphold and adhere to.

In fulfilling its core commitments, journalism needs to take care not to hurt or cause any unwarranted harm or offence to the people involved in the news, to the different sections of the public and to the community as a whole. Compassion is a core moral demand on the journalist.

Journalism must serve and be attentive to all the constituent sections of a community, recognising a special responsibility to the vulnerable, the oppressed and the voiceless.

Children constitute a very special segment of society. They represent the community of the future. Children deserve special attention and care because they are especially vulnerable and impressionable. Their

wellbeing therefore is of special concern to the journalist.¹ All general norms of journalism ethics gain special significance when applied to children.

The interrelationship between children and the news media has three broad dimensions:

1. **Coverage of children and their affairs:** When children are involved in any news event, its coverage by the media has direct implications for their wellbeing. The coverage can serve their best interest or it can cause them serious harm. It has implications for the image and representation of the children and their affairs. The news media coverage of children and their affairs influences the views and actions of the adults, the decision-makers. Just as media coverage can affect children, so does a dearth of coverage. Negligence of issues that are important to children has far reaching ramifications for their interests, rights and development.
2. **Children's Right to be heard:** Children have a right to speak out. Research on children and the media show that children's views are neglected even in issues directly involving or affecting them.² Moreover, children's voices are almost never heard in policy matters involving them or in the policy-setting processes that are often set in motion by journalism. What adults decide and do have direct and indirect effects on children. Children therefore need to be heard not just on matters or events directly concerning or featuring them, but in all relevant contexts.
3. **Children as consumers of news media:** Children regularly access news media—print, television or online. While the media must address children's right and need to be informed, journalists need to be aware of the risks of harm caused by any inappropriate content. Since news is primarily packaged for an adult audience, some of the contents could be harmful for a child consumer. Consequently, events and issues as depicted by the media may have serious impacts on child-consumers even if they do not directly involve children. The concerns therefore extend to the general arena of news as well.

News media, especially radio, television and online, package entertainment along with information. And a large volume of advertisements is run alongside news contents. These may seriously influence children. An analysis of this is not within the scope of this content analysis, but is nonetheless important to bear in mind.

All of these dimensions involve ethical concerns for journalists in the context of children. Both the baseline and follow-up study and the present content analysis find that to be ethical and fair to children, journalism in Bangladesh needs to do better in all three of the above-mentioned dimensions.

Sins of Commission and of Omission: Journalists need to bear in mind that children have special rights, special interests, special needs, and special vulnerabilities. Ethical violations or not fulfilling one's responsibilities can be of 'commission' as well as of 'omission.'

There are things journalists must not do in order to ensure children's wellbeing and to avoid causing them any harm from the news coverage. And there are issues and events journalists must cover properly for securing the best interest and welfare of children.

¹ For the purpose of this content analysis, children are those under the age of 18.

² *Children's Rights and Journalism Practice – A Rights-based Perspective*; UNICEF CEE/CIS 2007 and *Baseline Study – Children in Bangladesh News Media*; UNICEF Bangladesh; October 2010

Sins of commission occur when news coverage compromises safety and security of children; adds to their vulnerability; puts them at risks; perpetuates harmful and stereotypical portrayal or discriminatory depictions; stigmatises them; deals with children or their situations insensitively; robs them of dignity; or does not stop to consider the consequences and implications of news decisions for the child involved in news.

Lapses occur when journalists obtain information from a child and use it in a way that endangers him or her and when journalists do not obtain proper consent of the child and that of an adult responsible for his or her care. The younger the child is, the greater the need for acquiring the consent of an adult. The need would depend on the circumstances of the child as well.

Identification of children involved in a news piece always requires very careful considerations. When identity protection is required, journalists need to take care so that a story does not contain bits of information which, pieced together, could disclose the identity of the child. Protection, portrayal concerns and issues of sensitivity and responsibility are particularly crucial when dealing with children in vulnerable situations, but not limited to victims of crimes or abuses, users of illegal drugs and those in conflict with the law.

Sins of commission occur when media coverage uses a child or the child-image opportunistically, for instance, solely to sell a story or attempting to sell sensation.

Sins of commission also occur when news coverage offend and have harmful impacts on children; causes trauma, anxiety or desensitisation; or teaches them unsuitable and risky behaviour.

Sins of omission occur when children are excluded from the news agenda or included poorly; when events and issues crucial for their wellbeing are not covered adequately and properly; or when journalists neglect to tell a story that needs to be told.

Sins of omission occur when journalists do not go beyond covering the obvious and routine daily events and dig into situations important for children which require attention. Sins of omission occur when news coverage of children's affairs does not reflect the diversity of their situations; when marginalised sections are left out of media attention; or when discriminations are made in coverage.

Sins of omission also occur when the news media do not respond to the information needs of children and when the voice of the child is ignored in relevant news coverage.

Balancing Protection with Rights: The need to protect children from harmful content or from risks involving their participation in the news has to be balanced with their right to information and freedom of expression, in accordance with their age.

Codes and Guidelines: Journalism ethics survive in self-regulation. While ethical practices depend on individual journalists and media institutions, codification of journalism ethics or conduct is a rare practice in Bangladesh. The very few codes that are found, do not deal with the ethical concerns regarding children as such.³

³ Page 80; রিপোর্টারের জন্য নীতি-নৈতিকতা – প্রসঙ্গ শিঙ্গ; UNICEF Bangladesh, November, 2010

Codes of conduct or ethics and editorial guidelines or values and standards upheld by some of the world's leading organisations of journalists, media institutions and self-regulatory bodies however incorporate special concerns regarding children. The organisations include: International Federation of Journalists—IFJ, which represents journalists from over 100 countries; the National Union of Journalists for the UK and Ireland (NUJ); the Society of Professional Journalists (SPJ, USA); the British Broadcasting Corporation (BBC, UK); and the Press Complaints Commission (PCC, UK).

The IFJ has a complete set of guidelines for reporting on issues involving children. They summarise a key responsibility like this: “Media organisations should regard violation of the rights of children and issues related to children’s safety, privacy, security, education, health and social welfare and all forms of exploitation as important questions for investigations and public debates.”⁴

The BBC’s Editorial Guidelines describe the institution’s editorial value regarding children in the following words: ‘We will always seek to safeguard the welfare of children and young people⁵ who contribute to and feature in our content; wherever in the world we operate. We will preserve their right to speak out and participate, while ensuring their dignity and their physical and emotional welfare is protected during the making and broadcast of our output. Content which might be unsuitable for children will be scheduled appropriately.’⁶

The BBC’s Editorial Guidelines has a section on how to deal with people under 18 years of age, who contribute to and interact with the BBC content.⁷ The introduction to the section begins with stating that children and young people are very important to the BBC. It goes on to say that the BBC aims to provide them with challenging, educative, enjoyable and interesting content and to help them make sense of the world in which they live. One of the principles held forth in this section concludes with saying that the interests and safety of children must take priority over any editorial requirement. The other principle underscores the need to make sure that they are not caused any unnecessary anxiety or distress by their involvement in the BBC output.

The issue of appropriateness of the BBC content for a child consumer is specifically addressed in another section⁸, as well as throughout the Editorial Guidelines.

Ethical Dilemmas and Children: Ethics inevitably involve handling dilemmas—weighing between negative consequences of news decisions and deciding on the action that would cause lesser harm.

⁴ Page 62; Guidelines and Principles for Reporting on Issues Involving Children; *Child Rights and the Media – Putting Children in the Right*; IFJ; 2002. (<http://www.ifj.org/assets/docs/247/254/cf73bf7-c75e9fe.pdf>; last visited on 15.01.2012) These guidelines were first adopted in draft by journalists’ organisations from 70 countries at an UN-sponsored conference in Recife, Brazil. They were finally adopted at the Annual Congress of the IFJ in Seoul in 2001.

⁵ The BBC Editorial Guidelines and the media codes or guidelines in the UK classify someone under the age of 15 as children and those aged 15, 16 and 17 as young people. Protection and other issues, including the issue of parental consent, involving the under-18s are considered particularly important for those under 16 years of age.

Thinking through the real needs of the community helps resolve ethical dilemmas. Issues involving children may present dilemmas that would require very careful consideration of probable impacts of the news decisions.

The real needs of the community, or the public interest, can broadly be conceived as matters which ensure public good or wellbeing. Ethical journalism should especially prioritise the wellbeing of children. The Editors' Code of Practice enforced by the Press Complaints Commission—PCC, the self-regulatory body of the newspaper and periodical industry in the UK, provides a working definition of the public interest. It concludes with the statement: 'In cases involving children under 16⁹, editors must demonstrate an exceptional public interest to over-ride the normally paramount interest of the child.'¹⁰

The trend of news coverage on and for the children in the Bangladesh news media has to be assessed in the light of these ethical standards.

⁹ In the UK media guidelines, protection and other issues including the issue of parental consent are considered particularly important for those under 16 years of age.

¹⁰ *The Editors' Code of Practice*; amendments ratified in December 2011; <http://www.pcc.org.uk/cop/practice.html>; visited on 15.01.2012

OBJECTIVE AND METHODOLOGY

A baseline study, conducted in 2009, had tried to gauge the ethical standards maintained in the child-related news contents of representative national-level mainstream news media in Bangladesh for designing a training programme of journalists. The 2011 trend-analysis survey followed up this baseline study, revisiting similar contents in more or less the same set of news media.¹¹ The present follow-up survey does the same after a gap of two years.

OBJECTIVE

The second follow-up content analysis was undertaken to:

- Further understand the current trend of news coverage in the national-level mainstream media of Bangladesh on events or issues involving children and assess its ethical standards.
- To compare the key findings with those of the 2011 follow-up study to make a comprehensive assessment of the trend.
- Scrutinise selected content from the general arena of news that could potentially have harmful or negative impacts on a child consumer.

METHODOLOGY

1. Literature Review: Reviewed the *Baseline Study (2009/2010)*, *follow-up study (2011)*, *Children in Bangladesh News Media* and the handbook for ethical reporting on and for children (*রিপোর্টারের জন্য নীতি-নৈতিকতা – প্রসঙ্গ শিশু*), published by the UNICEF Bangladesh in October and November, 2010 respectively.

The previous two studies and the handbook had checked key international codes of ethics and conduct for journalists and studies on children and the media in different countries. These two works had briefly reviewed relevant national laws as well. A review of these works helped the researchers fine-tune the indicators of assessments used for the follow-up content analyses. The reflections from the training programme following the baseline study were also kept in mind.

Who is a Child: The previous two studies had studied The United Nations Convention on the Rights of the Child—UNCRC and the laws in Bangladesh to define the age-limit for childhood.

- The UNCRC defines anyone under the age of 18 as a child. Bangladesh was one of the pioneer states to ratify the UNCRC.
- In Bangladesh National Child policy in 2011 defines all individuals under 18 as children. Among the children, those aged 14-18 are additionally considered as adolescents.

¹¹ Both the research works have been conducted by the Management and Resources Development—MRDI on behalf of the UNICEF Bangladesh,

- The Children Act, 2013 is a major law regarding children in Bangladesh. It states no matter what is written anywhere else anyone till reaching 18 years of age is to be termed as a child. The Children Act stresses the state's responsibility to a child's protection needs. It deals with matters of institutional custody and care, protection and safety of children. This law stipulates special measures for destitute children and child offenders. The Act applies special and exclusive trial provisions for child offenders. It says that a child offender, or a child in conflict with the law, can only be dealt with by measures for protection, care and correction. The spirit is to reintegrate such children into society as responsible members.

However, the laws in Bangladesh, as well as in different countries of the world, specify different age-bars to define childhood for different purposes.

- ✓ The Suppression of Repression of Women and Children Act, 2000 (amended in 2003) define a child as anyone under the age of 16.
The Suppression of Repression of Women and Children Act addresses specific criminal offences including rape and other sexual crimes, trafficking, abduction, dowry, murder, incitement to suicide, and maiming a child with an intention to employ him or her in begging.
These two laws instruct the news media to protect the identities of child victims. The Children Act extends identity protection to juvenile offenders while reporting the legal proceedings.
- ✓ The Majority Act, 1875 on the other hand sets the age of maturity at 18.
- ✓ The Bangladesh Labour Act 2006 and The Penal Code 1860 limit childhood to younger ages in specific contexts. A few other laws set other age limits.¹²

In tune with the previous two studies, the second follow-up survey regarded 18 as the cut-off age while identifying child-related media contents. The researchers also concluded that this should be the age-limit of childhood for considering the impact of news contents on children.

2. Content Analyses—Child-related Items: Monitored the contents of selected national-level daily newspapers (10) covering in total twelve months or one year of outputs.

- < The volume and proportion, types, merits and possible impacts of news-coverage on children and their affairs were probed and analysed in order to get an idea of the prevailing trends and practices.
- < Mainly quantitative analysis of the child-related contents was carried out. The quantitative analysis, however, tried to incorporate basic qualitative assessment of the data.

The first follow-up had analysed the contents of selected national-level daily newspapers (10) and a daily news bulletin of television channels (4), covering in total three months—12 weeks, or to be precise, six fortnights of outputs.

The baseline study had analysed child-related news contents of 12 national-level daily newspapers and one daily bulletin(s) on three national-level TV channels over a period of three consecutive months.

- **The Period monitored:** Monitored outputs of twelve months or one year from January 2013 to December 2013. That makes it in total 365 days of coverage.

¹² Pages 49-61; *রিপোর্টারের জন্য নীতি-নৈতিকতা – প্রসঙ্গ শিশু*; UNICEF Bangladesh, November, 2010

The first follow-up had monitored outputs of six fortnights in alternate months, spread over one year prior to the commencement of the survey. The year spanned June 2010 to May 2011. For June, August and October of 2010, the first two weeks of the month were monitored. For December 2010, February 2011 and April 2011, the last two weeks of the month were monitored. That makes it in total 89 days of coverage.

The baseline study had monitored similar news contents over June, July and August in 2009. The follow-up survey aimed to get a feel of the broader general trend by spreading the monitoring period over a span of one year.

- **Criteria for selection of the news media:** The national-level newspapers were selected on the basis of their circulation and audience reach. Only broadsheet newspapers were selected.
- **The Newspapers Surveyed:** Monitored 10 national-level dailies—seven Bengali and three English.
 - ✓ **The sampled newspapers are:** *Prothom Alo, The Daily Jugantor, Shamokal, Ittefaq, The Daily Naya Diganta, The Daily Janakantha, Kaler Kantho, The Daily Star, New Age and Independent.* Except for *Kaler Kantho* and *Independent*, all the others in the list had been covered in the previous two surveys. The *Kaler Kantho* was included in the list during the first follow-up. The *Independent* has been included this time. The baseline sample of newspapers had included dailies *Amar Desh, Manabzamin* and *Amader Shomoy*. The follow-up surveys discarded these in order to assess a homogeneous mainstream trend.
 - ✓ **Pages and items scanned:** In tune with the previous two studies, the researchers scanned all news pages except for those on sports, business and international affairs. Besides, the special pages on women, health and culture were also monitored. News items including those generated by various announcements or appeals from members of the public, features, articles and photographs that concerned children and their affairs were taken for analysis.

The editorial policy of a newspaper plays an important role in deciding its news coverage priorities and the creation of its agenda for public debate and discussion. Editorials reflect the policy priorities of a newspaper. Editorial policies are crucial to creating enabling environments in media institutions for ethical reporting on and for children. The editorials of the sampled newspapers were scanned to gauge the level of importance attached to coverage of events and issues involving children.

3. Data Management and Analyses:

- A set of indicators were developed for identifying and assessing the characteristics of the child-related contents in newspaper. Two code-sheets were developed enlisting these classified indicators. Two more subsidiary code-sheets were developed from the main ones to suit the requirements of the negative impacts assessments for newspapers.
- The data for both quantitative and qualitative analyses were generated by observing and assessing the content items as per these code-sheets. A data-entry sheet was developed for each content item on which the data was recorded as per the code-sheets. (See Annexure-3 – ‘Code Sheets’)
- Crosschecks for assessment and coding consistency were done at regular intervals during the data coding. This was done again while going through the items for studying cases.
- Separate databases were then developed for the four groups of the newspaper contents. Inconsistencies and typing errors were checked and corrected before analysing the data. The

databases were developed and all data analyses were done using SPSS PC version 17.0 statistical software.

The second follow-up survey adopted the indicators used by the previous two studies after fine-tuning them for clearer and more precise observation and assessments. The research team of three members—a lead researcher, a media expert and a junior researcher—did the fine-tuning after reviewing the experiences of the baseline and follow-up monitoring. The lead researcher prepared an explanatory note on the codes and indicators. This was imparted to the other members of the team to ensure assessment consistency. The media expert and the junior researcher assessed and coded the content items under the supervision of the lead researcher.

The junior researcher kept a record of the key events or issues during the surveyed period and recorded pertinent observations on their influences over the media coverage involving children and their affairs.

NOTES ON THE INDICATORS

The complete code sheets are provided in Annexure-3 and 4. The indicators for analysing child-related news contents were developed after careful consideration of the relevant trends and ethical concerns. A few need some clarification.

Definitions: News

- **Event-based Straight Reports:** Straightforward factual accounts of the latest important events or developments; reported immediately, containing the bare essential facts of the day's events; usually brief, limited to the essential facts only.
- **Announcements or appeals:** Items generated by various announcements, notifications or appeals (obituary or obit; missing people; achievements; for help) from members of the public have been marked separately, but they also fall in the category of straight reports in a broader sense.
- **Follow-up Reports:** Reports which follow up events already reported and update readers or viewers on their developments over time. This type of reports belongs to the broad category of straight news.
- **In-depth Reports:** Reports that go beneath the surface of events; provide proper contexts and adequate background information; investigate and delve deep into the causes and clarify the consequences of events; dig out the real truth of an event; unearth wrong doings and fix their responsibility; explain what has really happened; help readers or viewers understand the complex realities; discern the processes and patterns of events and the issues involved; manifest journalistic enterprise. They are usually longer than straight news reports, but length alone is not the deciding criterion. While reports of this nature may not depend on daily events, reports on a day's events could also go in-depth.
- **Features:** Features are longer and in-depth, complex or entertaining stories in newspapers or television bulletins, usually strong in human interest elements or focusing on an offbeat issue or aspect. Features are more attractive and distinctive in style than the straight news pieces. They may focus on a current news event or on a timeless subject or issue.
- **Articles:** For the purpose of this study, articles are newspaper pieces similar to features but more independent of news events and the purposes of which often are to provide information or tips on specific subjects such as health or any matter of current concern to the public.
- **Standalone Photograph:** This term refers to photographs that are published in newspapers without any text story accompanying them. They could be images of daily events or photographs treated as independent feature pieces.

DEFINITIONS: News Producers

- **Staff Reporter:** This term refers to reporters who are on the monthly payroll of a media institution, usually based at the headquarter (Dhaka in this case).
- **Local Correspondent:** This term refers to journalists who send reports from outside the centre or districts and rural areas. They are usually paid a monthly retainer allowance and fees as per the outputs they generate.
- **Desk Reports and Compilations:** Reports that are prepared by the desk-based copy editors with information received from different sources such as news agencies or local correspondents. When a desk editor compiles information from different local correspondents or from a number of different sources and produce a composite report, some news media credit these as 'desk compilation'.

TERMINOLOGY: TREATMENT OF NEWS, NEWSPAPERS

- **Fold:** The fold that divides a newspaper page into top and down halves. The top half of the page, above the fold, is considered to be the more important area on a newspaper page.
- **Headline:** Headlines are titles of a newspaper or magazine story, set in display type over the story. 'Headline' also refers to the most important stories of an edition of a newspaper or of a television news bulletin.
- **Headline Size or Span:** Headlines of newspaper items are measured by their column-width or column-span. The column spread of a headline indicates the level of importance that the piece is treated with.
- **Banner Headline:** When a headline spans the width of all the columns on a page, i.e. stretches across the width of a page, it is termed a 'banner'. It usually goes at the very top of a page and is used for stories considered to be of utmost significance. Also called a streamer.
- **Italic Headline:** A headline set in *italic* type to signify its distinction.
- **Colour Headline:** A headline with type set in colour to signify its distinction.
- **Reversed Headline:** A headline with type in white set on strips in black or colour to set it out in reverse.
- **Screens:** Shaded areas of copy on a newspaper page, used to highlight a story or section from other pieces on the page.
- **Box and Border:** Frames or borders around stories and photographs to signify its prominence or to set it apart from other stories.
- **Highlights or Excerpts:** Especially significant or attractive bits of information or quotes excerpted and highlighted in a different typeface within the story space. Also called pull-out quote or pull quote.

A FEW CONCEPTS OF THE CODES

- **Issues and topics that are important for children:** A range of 52 issues or topics, covering a comprehensive realm of child-concerns in six clusters was predetermined. The clusters were as follows: 1. Abuse and Exploitation; 2. Vulnerability; 3. Children in Conflict with the Law; 4. Rights; 5. Children and Governance; 6. Success/Achievements. This list helped the researchers to measure the scope of coverage or neglect of children and their affairs in the media. The baseline study had used a list of 48 issues or topics. Ten more issues were added to this list, based on the indications from the baseline study.

A single item could touch upon more than one topic or issue and this overlapping was recorded during the data coding. Items covering overlapped issues were also marked out. Additionally, in order to get a broad classification, the total number of items marked within a cluster was counted separately.

Two points require further clarification:

✓ **Child death is divided up by four mutually exclusive causes**—The topic ‘Death by Accident’ refers to deaths caused by any accident. Then we have ‘Death from Health-Related Reasons’, ‘Murder’ and ‘Suicide’. All four issues are mutually exclusive. Therefore items registering these definitions could be added up for a total count of items featuring child-death.

✓ **Overlapping topics**—Items marked by single issues could also be registered under a generic issue. For example, items on ‘Rape’ could also potentially be marked under ‘Sexual Abuse’. No total count is possible between overlapping issues. In such cases, the broader category could give an idea of the total number of items on the related topic. Two carefully marked broader issues are Education and Healthcare. One issue is labelled as ‘Legal Support/Aspects’. In most cases, this is not an independent issue. It usually comes as an issue accompanying other relevant topics. As we will see, this marking helped researchers assess an essential quality of items on certain subjects.

- **Human Interest Elements:** This concept was applied to judge readability of stories as well as to analyse qualities of pictures or images in print and broadcast news. Items presenting events or issues in human terms are recognised as containing human interest elements. This is about portraying life and human experience in a way that appeals to the reader or viewer’s interest, compassion and which creates a sense of connection. Focusing on the human interest elements of a story can make it much more powerful, but if not exercised carefully, this style could lend itself to making stories sappy, melodramatic, patronising or sensational. Instances of using children solely for creating sympathy could be an example of abusing appeals to human interest.

- **Qualitative Assessment of Text Items:** Qualitative assessment of the text items in newspapers was carried out on four grounds—authenticity, clarity, readability (newspaper items only) and negative tone or implications of the content-matter. Standalone photographs could not be judged on these counts and were evaluated separately.

Text items were assessed on these counts by using the following indicators:

✓ **Authenticity**—Inadequacies of authenticity in reports, features, articles and editorials were measured against five indicators: information gaps or inaccuracies; sweeping statements; lack of citation of evidence such as documents or direct observation; weak, vague or inadequate sourcing of information, and lastly, lack of coverage of all the parties who are essentially involved in the matter. An item could record more than one inadequacy. Such items were additionally marked as showing multiple problems.

Three indicators were used to sort out items which were too brief for a proper assessment, items which showed no inadequacy of authenticity and items which were outstanding in authenticity. An item recorded as possessing one of these three characteristics was not marked by any other authenticity indicator. Therefore the total count of these three markings could be taken as the number of items manifesting no authenticity inadequacy.

✓ **Clarity**—Inadequacies of clarity in reports, features, articles and editorials were measured against the following four indicators: information inconsistencies; unanswered questions or incomplete information; unclear focus or lack of focus; and disruptions in the logical order or natural sequence of the story.

An item could record more than one inadequacy. Such items were additionally marked as showing multiple problems.

Three indicators were used to sort out items which were too brief for a proper assessment, items which showed no inadequacy of clarity and items which were remarkably clear. An item recorded as possessing one of these three characteristics was not marked by any other clarity indicator. Therefore the total count of these three markings could be taken as the number of items manifesting no clarity inadequacy.

- ✓ **Readability**—Inadequacies of readability in newspaper reports, features, articles and editorials were measured against the following five indicators: use of jargon or difficult words; long and complex sentences; lack of flow of language or structure; irrelevant information or repetition that made items unnecessarily lengthy; and lastly, lack of human interest elements.

An item could record more than one inadequacy. Such items were additionally marked as showing multiple problems.

Three indicators were used to sort out items which were too brief for a proper assessment, items which showed no inadequacy of readability and items which were good to read. An item recorded as possessing one of these three characteristics was not marked by any other readability indicator. Therefore the total count of these three markings could be taken as the number of items manifesting no readability inadequacy.

- ✓ **Negative Tone and Implications of Content-matter**—A total of 23 indicators arranged in four clusters were used to assess if the text items or narrations contained any negative tone or implications for the children involved in the story or for a child-consumer. The clusters were as follows: 1. Representation—this included stereotypical or negative portrayals of children; 2. Safety and Security—this focused on identity protection to children in sensitive situations and includes the issue of showing their photographs; 3. Impacts and Consequences—this looked into the effects of coverage on children, including stigma or discriminations and detailed descriptions of methods of antisocial or criminal activities that could encourage imitative behaviour; 4. Presentation and Style—this covered issues including graphic depiction of violence, sexual provocation, use of stereotypical words, violation of privacy, or using children solely to elicit sympathy of a viewer.

An item could record more than one inadequacy. Such items were additionally marked as showing multiple problems. Besides, in order to get a broad classification, the total number of items marked within a cluster was counted separately.

In the baseline study, one indicator in the above four clusters had referred to a positive phenomenon. For the follow-up survey, it was omitted from the list.

Three indicators in a fifth cluster were used to sort out items which were too brief for a proper assessment, items which had nothing negative in tone or implications and items which were positive on this count. An item recorded as possessing one of these three characteristics was not marked by any other tone and implications indicator. Therefore the total count of these three markings could be taken as the number of items manifesting no such problem.

In the baseline study, the items too short for a proper assessment could nonetheless be marked for some problems. In the follow-up survey a strict division was maintained between the problematic aspects and non-problematic ones (mutually exclusive) in order to get a clearer picture.

- **The Visuals:** The issue of protection of photographic identity of children involved in sensitive situations was checked along with the tone and implications indicators. A separate set of 12 indicators was used to assess the content of images involving children.

Eight of these indicators were used to identify images which contained negative elements. These were: graphic images of violence or gruesomeness; images of dead bodies; images violating privacy; indecent

images; sexually provocative images; images glorifying crime or criminal activities; images showing criminal or antisocial activities in detail; and lastly, images using children solely to evoke sympathy of a viewer—a phenomenon that could be seen as a form of emotional exploitation of the child-image.

A single photograph or image could record more than one negative element. Such images were additionally marked as showing multiple problems.

Three indicators were used to sort out images not containing any negative element, images containing positive elements and images containing positive human interest elements. An image recorded as possessing one of these three characteristics was not marked by any other indicators for images. Therefore the total count of these three indicators could be taken as the number of images manifesting no negative elements.

- **Angle of Items or News:** The concept refers to the approach or perspective from which an event or issue is viewed. It is the aspect or perspective of a story highlighted or emphasised by the journalist. Angle can be perceived as the slant given to a story. The angle of an item was assessed by two indicators—positive or negative. If the coverage of an event or issue mainly conveyed negative messages, scenarios or implications and denoted largely a negative point of view, it was defined as having a negative angle. If the coverage mainly conveyed positive messages, scenarios or implications and looked at the event or issue largely from a positive point of view, it was defined as having a positive angle.

A negative angle could potentially imply that the story was focusing mainly on the dark sides of an issue, while ignoring its positive aspects. A positive angle could potentially imply that the story was focusing mainly on the happy sides of an issue, while neglecting the negatives. Angles cannot be perceived as any assessment of the negative or positive qualities of coverage. Angles could only denote the main thrust of the coverage and, arguably, the positive or negative bends of the events or issues concerned.

The angle of an item could add some meaning, though not conclusively, when considered against the issue or topic covered by it. For example, if stories on a critical issue largely indicated a positive angle in their coverage, it could suggest that they were overlooking any negative aspect.

LIMITATIONS OF THE FOLLOW-UP TREND ANALYSIS

- In any content analysis survey, the perception of observers coding and generating the data is a potential source of inconsistency and unreliability since it varies between individuals. The research team tried its best to maintain a reasonable level of consistency among the assessments by its three observers and researchers in following the defined indicators. However, a small margin of error and variance especially in the qualitative data which assessed the tones and implications of the content-matter is perhaps inevitable. There is also a scope of difference of opinions in defining the in-depth coverage, but only in a very small number of cases.
- This follow-up survey, as well as the previous two studies, did not explore the contents on special pages targeted at children, as not all news media have them. Besides, these pages may not include news in their content for children. The objectives of these content-analyses required them to focus exclusively on mainstream news coverage. Monitoring such contents would be essential for finding out to what extent the news media are fulfilling the information needs of children.
- The monitoring and analysis of photographs or images could benefit from a more thorough and intensive investigation. The broad general parameters of the follow-up survey did not have a scope to

do that. The issue of protection of photographic identity of children in sensitive cases was checked along with the tone and implications indicators. This check excluded the standalone photographs, which are not high in number, but nonetheless could reveal some problems in this regard.

- The assessment of the angles of media outputs used two extreme indicators, i.e. positive and negative. A third indicator for recording the items which had an appropriate balance in their angles would have provided a more useful insight.

TABLES: NEWSPAPERS

Note: For those sets of codes where indicators may overlap in a single item, figures will not add up. These sets are marked by one code registering the phenomenon of multiple hits.

COVERAGE BASICS: NEWSPAPERS

- Over the 12 months of monitoring, the sampled pages of the 10 surveyed dailies yielded 13,176 items¹³ directly or incidentally involving children or their interests and affairs.
- Of these, 12,986 (99%) were news items and 190 (1%) were Editorials. Of the news items, 690 were standalone photographs, i.e. photographs without any accompanying report. Thus all text news items totalled 12,296, while all text items including the editorials totalled 12,486. The newspapers published in total 4,646 child-related photographs and 3,956 of them accompanied text pieces.
- To get an idea of the proportion of children-related coverage, all items on the sampled pages over the 12 months were counted.¹⁴ This totalled 342,324. Of these 334,500 (98%) were news items, while 7,824 (2%) were editorials. All photographs totalled 18,684.

Total Coverage and Child-related Coverage

	News (including photograph)	Editorial	Total
All items	334500	7824	342324
Child-related items	12,986 (3.88%)	190 (2.42%)	13,176(3.84%)

Note-

Number of all Text Items including Editorials: 12,486

Number of all Text News Pieces (Reports): 12,296

	All photographs	Total child-related photographs
	18,684	4,646 (24.86%)

Note- Child-related Standalone Photograph: 690; Photographs Accompanying Reports: 3,956

¹³ Ideally, contents are measured by the spaces they occupy but for the purpose of this study a rough estimation by number were considered adequate. The categorization of news indicated sufficient characteristics to assess the effective coverage volume and depth.

¹⁴ To get an idea of the proportion of children-related coverage, all items on the pages monitored were counted for the last month. This number was then multiplied by 12 (months) to get an approximate number of total news items on the sampled pages over the study period. The total number of editorials published over this period was calculated in the same method.

Basics: Follow-up 2011

(10 Newspapers; 6 fortnights—June 2010-May 2011)

Total Number of all Items: 87,773 (rough estimation)¹⁵

(News Items: 98%; Editorials: 2%)

Total Number of all Child-related Items: 2,474 (3%)

(Child-related News Items: 98%; Child-related Editorials: 2%)

Number of all News Items: 85982

Number of Child-related News Items: 2,419 (3%)

Number of all Editorials: 1,791

Number of Child-related Editorials: 55 (3 %)

Number of Child-related Photographs: 1,045 (4% of all approximately calculated photographs, which numbered 29,332)

(Standalone Photographs: 171; the rest recorded as those accompanying stories and as receiving multiple special treatments)

Number of all Text Items including Editorials: 2303

Number of all Text News Pieces (Reports): 2248

Observation:

In 2013 less than 4% of all items were related to children and their affairs. Compared to the 2011 survey, child-related total coverage and news coverage increased fractionally (less than 1 percentage point). Child-related editorials however saw a similar decrease (0.58 percentage point). The share of child-related photographs shows an abnormal rise—from 4% in 2011 to 25% in 2013; this perhaps indicates a miscalculation of total number of photographs.

The coverage trend continues to indicate an insignificant coverage of children and their affairs was a key problem. This insignificance has again been accentuated by the dominant nature and quality of coverage as well.

Child related coverage Breakdown by Months

Months	Frequency	Percent
August	1615	12.3
May	1447	11.0
January	1229	9.3
September	1215	9.2
December	1049	8.0
November	1046	7.9
March	1043	7.9
June	1038	7.9
July	964	7.3
October	875	6.6
February	828	6.3
April	827	6.3
Total	13176	100.0

¹⁵ To get an idea of the proportion of children-related coverage, all items on the pages monitored were counted for the first month. The count for news items (29,176) was then multiplied by three (months) to get an approximate number of total news items on the sampled pages over the study period. The total number of editorials published over this period was counted separately and added to the total number of news items to estimate the total number of all items.

Base	13176
-------------	--------------

Monthly Distribution of Child-related Items (follow-up 2011): June 2010—14.6; August 2010—17.8%; October—12.9%; December 2010--22.1%; February 2011—17.1%; April 2011—15.4%

Observation:

The number of child-related items varied depending on the corresponding flow of events. The 2011 follow-up study had matched the coverage pattern with an even start, thus confirming this observation. Therefore to understanding the ebb and flow in child related coverage, one needs to check the major events of the period as well as special days, weeks or programs on the calendar.

KEY FEATURES OF EDITORIALS

Breakdown of Editorials by Months:

Months	Child-related Editorial	Percentage by per month
August	24	12.6
November	24	12.6
December	21	11.1
September	20	10.5
March	19	10.0
April	17	8.9
May	16	8.4
January	14	7.4
February	11	5.8
June	10	5.3
July	8	4.2
October	6	3.2
Total	190	100.0

Monthly Distribution of Child-related Editorials (follow-up 2011): Total number of editorials: 55 June 2010—4; August 2010—10; October—7; December 2010--17; February 2011—8; April 2011—9.

Issues Covered by Child-Related Editorials

Issues	No. of Editorials	% of 190
Abuse and Exploitation: Cluster Total	52	27.36
Sexual Abuse/Harassment	2	1.05
Trafficking	2	1.05
Kidnapping/Abduction	8	4.21
Physical Abuse	3	1.58
Psychological Abuse	8	4.21

Corporal Punishment at School	2	1.05
Murder	27	14.21
Suicide	1	0.53
Rape	10	5.26
Vulnerability: Cluster Total	29	15.26
Vulnerable Children-Street	2	1.05
Vulnerable Children-Domestic work	4	2.11
Vulnerable Children-Other hazardous labour	2	1.05
Other forms of Child Labour	2	1.05
Vulnerable Children-Child Marriage/Mothers	7	3.68
Children with Disabilities	2	1.05
Death by Accident	10	5.26
Accident	1	0.53
Children in conflict with the law: Cluster Total	20	10.52
Drug Abuse and Peddling	4	2.11
Violence and other 'Crimes'	18	9.47
Rights: Cluster Total	116	61.05
Education	60	31.58
Maternal and Child Nutrition	11	5.79
Healthcare	12	6.32
Child Birth Registration	1	0.53
Recreation/Sports/Culture	1	0.53
Freedom of Expression	2	1.05
Legal Support/Legal Aspects	12	6.32
Survival	17	8.95
Lifestyle	2	1.05
Discrimination/ Injustice	11	5.79
Children and Governance: Cluster Total	22	11.57
Govt. Policies Related to Children	7	3.68
Announcements by Govt./State Dignitaries	1	0.53
Govt. Allocations	1	0.53
Bad Governance and/or Corruption	14	7.37
Govt. Special Institutions for Children	2	1.05
Success/Achievements: Cluster Total	6	3.15
Academic Achievements/Excellence	7	3.68
Editorials covering multiple Issues	64	33.68
Base: All child related editorials-190		

Follow-up 2011: Most-covered Editorial Issues: Education (33%) Government policies related to children (18%) Legal supports/aspects (15%) Murder (9%). Murder, suicide and death from health related reasons in total claimed 15% of the editorials

Observation:

Issues related to education again generated the highest number of editorials. Child death, especially murder, led to a good number of editorials. Involvement of children in violence and other crimes drew some attention. As many as 64 editorials (34%) registered multiple hits on the code of issues.

Authenticity (Editorials)

Authenticity	Number of editorials (Total:190)	%
Info gaps/Inaccuracy	1	0.53
Sweeping Statement	5	2.63
Evidence- Documents/ Direct observation- not cited	2	1.05
Weak, vague or inadequate sourcing	2	1.05
All the essentially involved parties not covered	2	1.05
Multiple authenticity problems	1	0.53
Not showing any problem of authenticity	179	94.21
Base: All child related editorials-190		

Observation

No editorials could be marked as outstanding in authenticity this time and also during the follow-up study. However, the share of editorials showing no authenticity problems increased significantly (85% in 2011; 94% in 2013)

Clarity (Editorials)

Clarity	Total editorials-190	%
Information Inconsistency	2	1.05
Unanswered Questions/Incomplete Information (Gaps in context, cause, consequences)	11	5.79
Unclear Focus /Lack of Focus	4	2.11
Multiple Clarity problems	2	1.05
No problem with clarity	155	81.58
Good and Clear	20	10.53
Base: All child related editorials-190		

Observation

Good and clear editorials increased significantly, 2% in 2011 and 11% in 2013

CATEGORIES OF CHILD-RELATED ITEMS

Classification: All child-related Items

Items by classification	Frequency	Percent
Event-based Straight Report	9342	70.90
Follow-up Report	1363	10.34
In-depth Report	206	1.56
Feature	234	1.78
Editorial	190	1.44
Standalone Photograph/Pic	690	5.24
Opinion Report	113	0.86
Appeal for Help	469	3.56
Announcement of Achievement	200	1.51
Obit Announcement	15	0.11
Announcement of Missing Children	132	1.01
Article	222	1.68
Base: All Child -related Items(13176)		

Classification: All child-related News Items (Excluding Editorials)

News items by classification	Frequency	Percent
Event-based Straight Report	9342	71.94
Follow-up Report	1363	10.50
In-depth Report	206	1.59
Feature	234	1.80
Standalone Photograph/Pic	690	5.31
Opinion Report	113	0.87
Appeal for Help	469	3.61
Announcement of Achievement	200	1.53
Obit Announcement	15	0.12
Announcement of Missing Children	132	1.02
Article	222	1.71
Base: All child-related news items (12986)		

Broad Classification: Child-related Reports

Items	Frequency	% of total news reports
Event-based Straight Reports including Follow-up Reports	10705	87.06
All Appeals and announcements	816	6.63
In-Depth Report + feature+ opinion+ articles	775	6.30
Base: All child-related reports (12296)		

All Child-related Straight Reports: 10,705 (87% of all Child-related Reports) and All Child-related In-depth Reports including Features, Opinion Reports and Articles: 775 (6% of all Child-related Reports)

2011 Follow-up: All Child-related Straight Reports: 91% of all Child-related Reports) and All Child-related In-depth Reports including Features, Opinion Reports and Articles: 9% of all Child-related Reports)

Observation:

Event-based straight reports continue to dominate the scenario, with follow-up reports showing a slight increase. But, the share of in-depth coverage has gone down.

TREATMENT: CHILD-RELATED NEWS

Placement of items		
	Frequency	Percent

Opinion Report	0	0	3	3	2	0	0	7	0	0	0
Appeal for Help	296	0	0	0	0	0	0	0	0	0	0
Announcement of Achievement	90	1	20	0	0	173	0	0	0	0	0
Obit Announcement	12	1	0	1	0	0	0	0	0	0	0
Announcement of Missing Children	116	0	0	0	0	0	0	0	0	0	0
Article	3	1	1	8	0	0	0	18	0	0	0
	4769	1078	641	164	375	390	29	136	670	58	1

Some features of child-related coverage

The features	No. of items	percent	Base
2 Paragraphs or Less	4769	39	12,296 (all reports)
Seminar/Roundtable/Workshop/ Programme	1078	8	13,176 (all items)
Public exam results	641	5	13,176
Day observation	164	1	13176
Incidental Involvement	375	3	12,986(all news items including standalone pic)
Good role models	390	3	13,176
Lead story	29	0.23	12,296
Special page for children less frequent	136	1	12,296
Death by Drowning	670	5	13,176
Dead victim's name (sensitive case)	58	0.47	12,296
Special page for children weekly	1		

Observation:

More than one-third child-related items spanned two paragraphs or less. These tiny reports are infact nearly 40% of all text reports (12296). This is another indication of insignificant coverage.

COVERAGE OF ISSUES

Issues/topics covered by the child-related items

Issues and topics	Number of items	%
Abuse and Exploitation: Cluster Total	4,220	32.02

Academic Achievements/Excellence	969	7.35
Other Positive Subjects	121	0.92
Items covering multiple Issues	4,310	32.71
Base: All child-related items(13176)		

Observation:

* 28% of the items covering Education focused on the results of the public examinations (50% in 2011). This indicates greater diversification of items on education.

** in total 469 items were appeals from members of the public seeking financial help. These were, almost all, on grounds of illness and treatment. This shows that 47% of the items covering Healthcare issues were actually such appeals.

Note: 10 issues go covered by 5percent or a higher proportion of items. During the 2011 follow-up study 16 issues got covered by 5 percent or a higher proportion of items. During the baseline period 10 issues had got up to this scale of coverage.

On a general note, items on education saw a decrease while those on death by accident scaled higher.

Total number of stories belonging to the Rights cluster decreased considerably (67% cluster in 2011). So did items in children and governance cluster (16% in 2011).

Top 10 child-related issues covered

Top 10 Issues	Freq	%
Education	2288	17.36
Death by Accident	1863	14.14
Murder	1664	12.63
Rape	1116	8.47
Healthcare	1008	7.65
Survival	1005	7.63
Academic Achievements/Excellence	969	7.35
Legal Support/Legal Aspects	800	6.07
Kidnapping/Abduction	694	5.27
Recreation/Sports/Culture	599	4.55
Base: All child-related items(13176)		

**Legal aspect is not really an independent issue*

Follow-up 2011: The Top Ten Issues

Education 22%; Rape 8%; Recreation sports culture 7%; Academic achievement 6%; Freedom of expression 6%; psychological abuse 6%; Legal support aspects 17%; Killing 14%; Health care 10.27%; Death by accident 8.9%; of all child-related items (2644). All other issues had been covered by less than 5% of the items.

Top four generic issues

Issues	No. of Items	% of 13176
Child death	4,071	30.90
Education	2288	17.36
Healthcare	1008	7.65
Recreation	599	4.55

Follow-up 2011: Top Four Generic Issues

Child-death (30%); Education (22%), Healthcare (10%) Recreation 7%

Death coverage: Breakdown

Child-death Issues	No. of Items	% of 13176
Murder	1,664	12.63
Death by Accident	1863	14.14
Death from health related reasons	194	1.47
Suicide	350	2.66
	4,071	30.90

Follow-up 2011: Murder 14%, Death by accident 9%, Health related 1.37% Suicide 5%, Total death coverage 30%

Observation:

Child death continues to dominate the coverage on children.

Child-death: Editorials (Total 190, child death 38—20%)

Murder	27
Death by Accident	10
Suicide	1

Follow-up 2011: Child-death editorials— in total 15% (8) of all editorials (55)

Observation:

Editorial attention to child-death seems to have gone up.

Child-death: In-depth reports, features and articles

Murder (In-depth)	6	1
Suicide(In-depth)	1	0
Death by Accident(In-depth)	1	0
Murder (Feature)	2	0
Death from health related reasons (Feature)	3	0
Death by Accident (Feature)	8	1
Murder (Articles)	10	1
Death by Accident (Articles)	1	0
Total	32	4.12
Base: All in-depth+feature+articles	775	

Follow-up 2011: Total 29% of all depth reports, features and articles covered issues of child-death.

Observation:

The share of in-depth coverage on child-death issues shows a sharp decline. This probably also reflects a flow of incidents involving child-death.

Zero to 1% coverage of issues (0%– 12 issues, 1%– 17 issues)

	Issues and topics	Hits	%

Positive	460	66.7
Negative	230	33.3

Angle of lead stories

Lead Story total	29
Positive angle	6 (21%)

Follow-up 2011: Angle of child-related items: Negative (49%);

Issue/topics which had been largely negative in angle included: Psychological abuse, killing, suicide, drug abuse, Death by accident, sexual abuse and harassment, kidnapping

Issue/topics which were largely positive in angle included: Maternal and Child nutrition, freedom of expression, recreation, child birth registration, government policies related to children and Announcements by state dignitaries, NGO initiative, creativity, government special institution

Observation:

The percentage of stories in a negative angle has increased consecutively. Child birth registration falls within this category. NGO initiatives, government policy related stories, maternal and child nutrition issues, education and different achievement topics continued to be mostly done in a positive angle.

CHILD-RELATED REPORTS: THE GENDER PERSPECTIVE

Base (total items per issue)	413		1,116		339		148		

Follow-up 2011: Items having nothing negative in content matter 62% including 18% items that were too brief for proper assessment.

Observation:

About 88% items have been judged as showing no problems in tone and implications of content matter but as detailed analysis of some aspects show, there are reasons to be concerned. For example, in general there is a tendency to disclose identities of children in conflict with the law. Besides these are subjective judgements and some oversights cannot be ruled out.

Base: All photographs on monitored pages of each newspaper

Note: Due to overlapping of marking, the number of photographs with reports per newspaper would vary by plus/minus 1 to 6. The total numbers of photos (standalone and photos with reports) however are checked and confirmed. The number of child-related photographs for each newspaper given with the photo-content table below is the correct figure.

Child-related Standalone Photographs and Text Items

INAPPROPRIATE GENERAL NEWS CONTENTS: NEWSPAPERS

Inappropriate contents in the general arena of news could have immediate or lasting negative impacts on those in the audience under 18 years of age. To explore this issue, researchers monitored the sampled pages and bulletins of the 10 newspapers over the study period. All general news items were scanned and those clearly considered potentially harmful for a child reader or viewer were taken for quantitative analysis. The items totalled 60.

THE KEY CONCERNS

General news items which could potentially have negative influences or impacts on an underage reader or viewer were not found to be very large in number. While a proper study of this phenomenon would require monitoring over a longer stretch of time and across a wider range of pages or news programmes, the limited samples of this survey provided some useful insights.

- The primary concerns were found to be with the visuals—in what the photographs in newspapers showed.
- Closely following were problems in the tones of these news stories, their approach to a sensitive event or issue and in their choice of words.
- The most common negative aspect of these news items was disrespect to the dead, i.e. showing dead bodies in an exploitative manner, in some instances denoting a celebration of morbid horror and gruesomeness, presumably in an attempt to shock the viewers and sell sensations. More stories on television showed dead bodies, than did newspaper stories.
- Other common problematic dispositions were making stories sensational in a melodramatic way; glorifying or celebrating crimes and violence; dwelling on details of violence and antisocial or criminal activities; and falling into prejudicial or stereotypical generalisations. Often wrongs were committed on the notes of sympathy or righteousness, especially in the television pieces.
- Such irresponsibility or lapses were more frequent in items covering crimes, accidents and drug problems. Some of the newspapers and channels seemed more inclined to such coverage, when the nature of the events provided the scope to do so.
- Interestingly, exploitation of sexuality or sex appeals featured only discreetly in a handful of these items.
